INTERNATIONAL AS PHYSICS

Unit 1 Mechanics, materials and atoms

Tuesday 5 January 2021

07:00 GMT

Time allowed: 2 hours

Materials

For this paper you must have:

- a Data and Formulae Booklet as a loose insert
- a ruler with millimetre measurements
- a scientific calculator, which you are expected to use where appropriate
- a protractor.

Instructions

- Use black ink or black ball-point pen.
- Fill in the boxes at the top of this page.
- Answer all questions.
- You must answer the questions in the spaces provided. Do not write outside the box around each page or on blank pages.
- All working must be shown.
- If you need extra space for your answer(s), use the lined pages at the end of this book. Write the question number against your answer(s).
- Do all rough work in this book. Cross through any work you do not want to be marked.

Information

- The marks for questions are shown in brackets.
- The maximum mark for this paper is 80.

	Section A	box
	Answer all questions in this section.	
0 1	State two precautions for the safe use of a gamma source in a school laboratory. [2 marks]	
	1	
	2	
0 2 . 1	State what is meant by the rest energy of a particle. [1 mark]	
0 2.2	Calculate, in MeV, the rest energy of an electron. [2 marks]	
	rest energy = MeV	3

A tennis ball of mass $58\ \mathrm{g}$ has a rough surface.

A cricket ball of mass 160 g has a smooth surface.

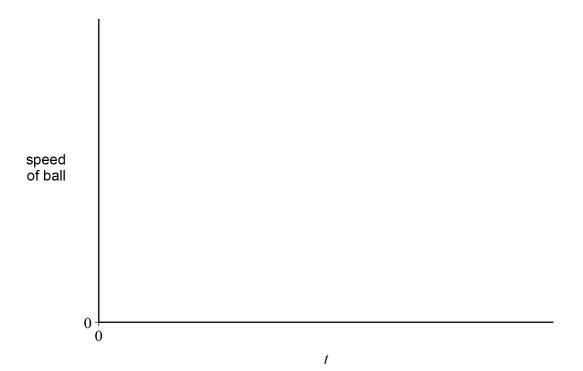

Assume that the balls have the same diameter.

Both balls are dropped from the roof of a tall building at the same time and they fall through the air to the ground.

Sketch, on the axes below, graphs to show the variations with time t of the speed of each ball.

Label your graphs with a ${\bf T}$ for the tennis ball and a ${\bf C}$ for the cricket ball. No calculations are required.

[3 marks]

Turn over for the next question

Turn over ▶

0 4.1	An object is made to rotate by a couple acting about an axis through its cen mass.	tre of	C
	State what is meant by a couple.	[2 marks]	
0 4.2	State how a single force applied to an object can cause the object to rotate.	[1 mark]	

In the decay of a nucleus of nitrogen-12, an electron neutrino (v_e) and another particle **X** are emitted from the nucleus. The decay is shown in the equation below.

$${}^{12}_{7}N \rightarrow {}^{-}_{6}C + X + {}^{-}_{-}v_{e}$$

0 5. 1 Identify X.

[1 mark]

 $\mathbf{X} =$

0 5. 2 State the nucleon number of the nucleus produced by this decay.

[1 mark]

nucleon number =

0 5. 3 Complete below the missing data for the neutrino.

[1 mark]

 $v_{\rm e}$

0 5. 4 Explain why the existence of the neutrino was suggested before the particle was observed.

[2 marks]

5

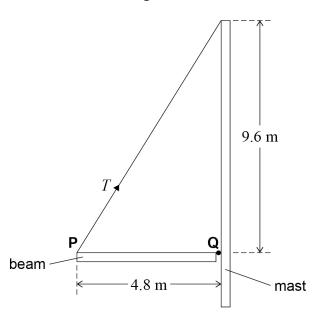

Figure 1 shows the mast of a sailing boat.

A uniform horizontal beam PQ is attached by a pivot to the mast at Q. The beam is supported by a light inextensible rope attached to the top of the mast and to the free end of the beam at P.

The tension in the rope is T.

Figure 1

0 6 . **1** The mass of the beam is 12 kg.

Calculate T by taking moments about ${\bf Q}$.

[4 marks]

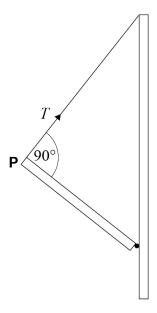

T = N

0 6 . 2

The end **P** of the beam is now raised by shortening the rope until it makes an angle of 90° to the beam as shown in **Figure 2**.

Figure 2

The magnitude of T varies as ${\bf P}$ is raised.

Explain the variation in the magnitude of	<i>T</i> .
Calculations are not required.	

Calculations are not required.	[2 marks]

0	7

In an experiment to determine the acceleration due to gravity, a steel ball is dropped from rest.

The time t taken for the ball to fall a distance h is measured for a range of values of h. All of the measurements are shown in **Table 1**.

Table 1

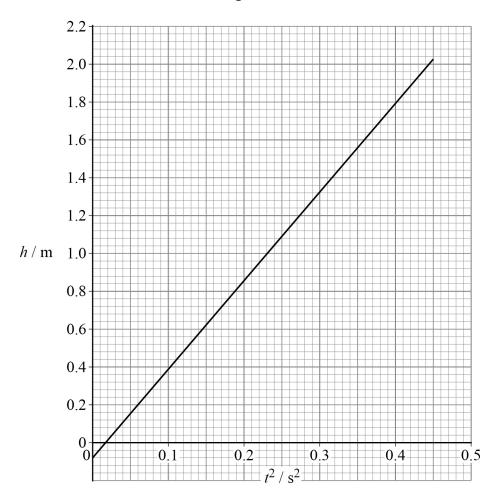

<i>h</i> / m	t / s
0.5	0.35
1.0	0.48
1.5	0.6
2.0	0.67

0 7.1	Describe three ways in which the procedure and the recording of results coul improved. Refer to Table 1 in your answer.	d be
		3 marks]
	1	
	2	
	3	

Figure 3 shows the best-fit line of a graph of h against t^2 for this experiment.

Figure 3

0 7. 2 Determine, using **Figure 3**, a value for the acceleration due to gravity.

[3 marks]

acceleration due to gravity = $m \ s^{-2}$

Question 7 continues on the next page

	10		
0 7.3	The best-fit line in Figure 3 does not go through the origin. Suggest a systematic error that could account for this.	[1 mark]	Do not write outside the box
0 7.4	Draw a labelled diagram of the arrangement of apparatus you would use to measure $\it t$ to an appropriate resolution.	[2 marks]	
0 7.4		[2 marks]	

A strand of spider web silk is tested by increasing the tension in it until it breaks. **Figure 4** shows a stress–strain graph for the strand.

Figure 4

0 8 . 1	Explain whether or not the graph in Figure 4 shows that the strand is elastic.
	[2 marks]

0 8 . 2 The original length of this strand is 1.8 cm.

Show that the length of the strand just before it breaks is approximately $10~\mathrm{cm}$.

[2 marks]

Question 8 continues on the next page

0 8		3
-----	--	---

The work done per unit volume in stretching the strand is equivalent to the area under a stress–strain curve.

The volume of the strand remains constant as it stretches.

The initial diameter of the strand is $8.0 \times 10^{-6} \ m.$

Determine the energy needed to break the strand.

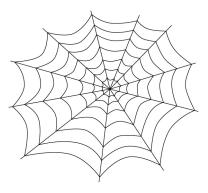

[4 marks]

energy =	T
onorgy	J

0 8 . 4

Figure 5 shows the spider's web.

Figure 5

An insect flies into the web. The kinetic energy of the insect is much greater than the value of energy calculated in Question **08.3**.

Suggest why the web is unlikely to break.

[1 mark]

Do not write outside the box

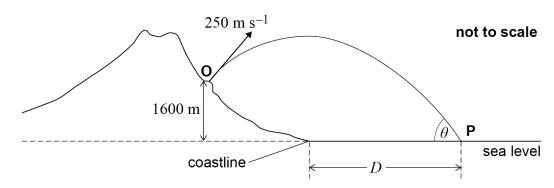

0 9

A rock is ejected from point **O** on the side of a volcano and hits the sea at **P**. **Figure 6** shows the trajectory of the rock.

The mass of the rock is $3.70~{\rm kg}$ and its initial speed is $250~{\rm m~s^{-1}}$. O is $1600~{\rm m}$ above sea level.

Assume that air resistance is negligible.

Figure 6

0 9.1 Show that the kinetic energy of the rock as it enters the sea at **P** is approximately 1.7×10^5 J.

[3 marks]

0 9 . **2** Show that the speed of the rock at **P** is approximately 300 m s^{-1} .

[1 mark]

Question 9 continues on the next page

	The horizontal component of velocity of the rock at ${\bf O}$ is $167~{\rm m~s^{-1}}$.		outs !
0 9.3	Show that the vertical component of the velocity of the rock at ${\bf P}$ is approximately $260~{ m m~s}^{-1}$.		
		[2 marks]	
	The made and an the control of D at an angle of Ota the head-antal		
0 9 . 4	The rock enters the sea at P at an angle of θ to the horizontal. Calculate θ .		
		[1 mark]	
	heta=	· · · · · ·	
0 9.5	The rock reaches its maximum height when it is exactly above the coastline.		
	Calculate D , the distance of ${\bf P}$ from the coastline.	[3 marks]	
	D =		10
	D =	m	

Section B

Answer all questions in this section.

1 0

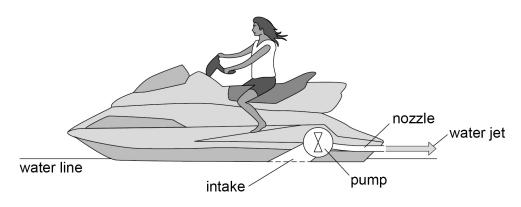

Figure 7 shows a jet ski moving horizontally in a straight line.

The jet ski takes in water through an intake below the water line.

A pump ejects the water horizontally at high speed through a nozzle at the back of the jet ski.

The jet ski and rider have a combined mass of 521 kg.

Figure 7

1 $\boxed{\mathbf{0}}$. $\boxed{\mathbf{1}}$ The rider accelerates the jet ski uniformly from rest to its top speed of $27~\mathrm{m~s^{-1}}$ in a distance of $63~\mathrm{m}$.

Show that the resultant force accelerating the jet ski is approximately 3.0 kN.

[3 marks]

Question 10 continues on the next page

1 0 . 2	Explain, in terms of momentum, how the jet ski is propelled forwards.	[2 marks]	outside box
1 0 . 3	During the acceleration, the jet ski ejects 78 kg of water per second through nozzle.	the	
	Calculate the speed at which the water is ejected from the nozzle.	[2 marks]	
	speed =	m s ⁻¹	7

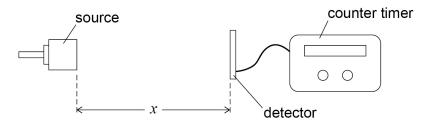

Do not write outside the box

1 1

Figure 8 shows the apparatus used to verify the inverse-square law for gamma rays. The distance x between the source and a detector is measured.

The detector is connected to a counter timer and the count rate C is measured for different values of x.

Figure 8

A student suggests that C is given by $C = \frac{k}{x^2}$ where k is a constant.

1 1 . 1

The count rate was measured three times for x = 0.520 m.

Table 2 shows the data recorded.

Table 2

Elapsed time / minute	5.00	5.00	10.00
Total count	2246	2263	4458

Calculate the mean count rate in counts per minute.

[1 mark]

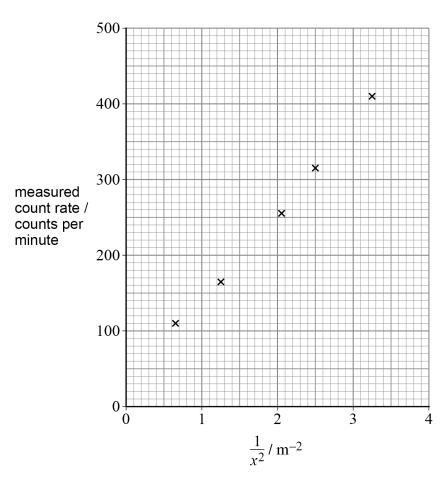

mean count rate = counts per minute

Question 11 continues on the next page

Figure 9 shows a plot of *C* against $\frac{1}{x^2}$ for all of the other measured values of *C* and *x*.

Figure 9

1 1. 2 Plot, on **Figure 9**, your answer to Question **11.1**.

[1 mark]

1 1. 3 Draw a line of best fit on Figure 9.

[1 mark]

1 1.4	Determine the gradient of your best-fit line on Figure 9.	[3 marks]	outsid bo
	gradient =co	ounts min ⁻¹ m ²	
1 1.5	Explain whether or not Figure 9 supports the student's suggestion that	$C = \frac{k}{r^2}$.	
		[1 mark]	
1 1.6	State the physical quantity represented by the intercept on the <i>y</i> -axis.	[1 mark]	
11.7	Determine the value of the intercept on the y -axis.	[1 mark]	
	value of the intercept = co	ounts per minute	9
	END OF SECTION B		

Section C

Each of the questions in this section is followed by four responses, **A**, **B**, **C** and **D**.

For each question select the best response.

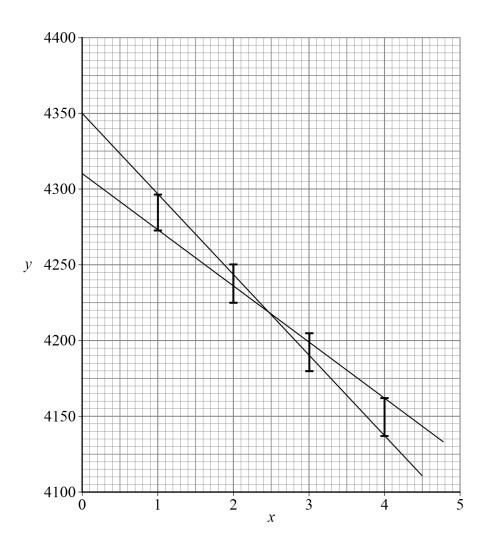

,		uestion is allowed. Inpletely fill in the circle alongside the appropriate answer.
CORREC	т метнор	WRONG METHODS
If you v	vant to change y	our answer you must cross out your original answer as shown.
If you v as sho		an answer previously crossed out, ring the answer you now wish to select
